

01 / BEFORE YOU BUILD

The While-You-Sleep Storefront

Preparation Guide

Set the direction once. Give the automatic workflow the accounts, access and rules it needs to do the repetitive work for you.

xoxo, Jodie

02 / YOUR ROAD MAP

Start with the choices.

The main path is automatic: product selection, your authorized links, the look destination, original images, Pin copy, scheduling and reconciliation. Manual steps are optional ways to save credits.

The automatic promise / 03

Choose your runtime / 04

Accounts and access / 05

Amazon and destinations / 06

Product records / 07

Disclosure and rights / 08

Pinterest and publishing / 09

Connections and tests / 10

Your image budget / 11

Your visual world / 12

Optional extras / 13

Before tasks go on / 14

Sources and checks / 15

03 / THE MAIN PATH

You set the direction.

THE AGENT DOES THE REPETITIVE WORK

Chooses the next calendar looks, sources the products, records links for your account, creates or updates the destination, makes two distinct images, writes the copy and schedules through the tested route. It then reconciles what actually happened.

YOU CHOOSE THE RULES

Your theme, accounts, public boards, pace, budget, persona and optional channels. Approve the setup scope and the exact first test Pin. Security checks and changes outside that scope may need your attention.

NO WEEKLY SHOPPING HOMEWORK

You do not have to fill a weekly product sheet or make every Idea List on the automatic path. If access fails, the queue keeps its work and reports the blocked capability. It does not silently turn into a manual kit.

The product is an automatic workflow specification. Its actual unattended route must pass the account tests before it is described as working. Sales, traffic and commissions are never guaranteed.

04 / CHOOSE YOUR VERSION

Automatic is the main path.

AUTOMATIC

A recurring agent and its tested account routes handle the full approved workflow. ChatGPT Work can own connected steps; a permitted browser operator handles account actions that need it. Save one operator per write.

OPTIONAL CREDIT-SAVING OR MIXED

Use a normal ChatGPT or Claude chat for planning and copy. Choose to supply links, run images or schedule natively yourself. Your recipe names each step you chose. These alternatives do not replace automatic execution by default.

CLOUD OR LOCAL

Cloud works with your computer off only if every required account action passes in that runtime. Local browser execution needs your computer and app available. A cloud-plus-local arrangement needs a tested persistent handoff.

A saved recurring prompt is a schedule, not proof that a scheduled run can reach Amazon, write the list and publish.

05 / ACCOUNTS

Gather access, not products.

AMAZON

Approved Associates access. Add Influencer approval and your storefront for Idea Lists. Associates-only uses your own live website. Keep your sites current in Associates Central.

PINTEREST

A business account and at least one public production board. Record exact board URL, public-status evidence and publisher assignment. A secret test board is for a dry run only.

AUTOMATIC TOOLS

A recurring runtime; durable records; a supported, permitted Amazon account operator; your chosen image provider; and a publishing route that passes capability and consent checks. No single browser-agent brand is required.

OPTIONAL ONLY

Brand Closet lesson access for Outfit of the Day. A connected website for the blog half. Instagram and its supported publisher for feed posts. None is needed for the core Influencer route.

Sign in through secure account flows. Never put passwords, one-time codes or API secrets into the kit, task text or product records.

06 / AMAZON

One look. One destination.

INFLUENCER / IDEA LIST

The automatic operator creates or updates your own per-look Idea List, adds the selected products and reads back its URL and contents. It reuses an existing valid list instead of making duplicates.

ASSOCIATES ONLY / YOUR SITE

The tested site route publishes a shop-the-look page with your authorized item links and disclosure. The page must load before its Pins are scheduled. Register the site with Amazon and test that Pinterest accepts its domain.

CATALOG ACCESS AND LIST WRITES ARE DIFFERENT

Creators API can be an eligible product source. It does not establish Idea List write access. Setup records sourcing, link creation/capture, list creation and readback separately, including applicable permission evidence.

IF YOU CHOOSE MANUAL

Pick the items, copy your own authorized links and create the list or page. Return the URL so the assistant can check it. This is the optional alternative.

07 / PRODUCT RECORDS

The agent fills the sheet.

Every selected product gets a durable record before image generation. These are facts and evidence, not an invented shopping catalog.

IDENTITY

LOOK_ID, ASIN, plain product name and selected variant.

VERIFIED DETAILS

Color, shape/cut, material when known, distinctive details and checked date.

YOUR LINKS

Your authorized affiliate link where needed, product address and destination/list ID.

SOURCE AND STATUS

Operator, permitted source method, rights evidence, verification timestamp and missing capability, if any.

Unknown facts stay blank or "not asserted." No invented ratings, stock, materials, ASINs or affiliate tags. Original or licensed imagery stays separate from Amazon-hosted assets.

08 / RIGHTS

Pretty still needs to be true.

DISCLOSURE

Monetized Pin descriptions start with #ad and include the configured Amazon disclosure. The kit uses: "As an Amazon Associate I earn from qualifying purchases." Follow current terms for your marketplace and account.

PRODUCT MATCH

A generated outfit is styling inspiration unless there is evidence it depicts the actual linked products. Props are not automatically products. "Every piece linked" is allowed only when the destination actually identifies every featured product.

IMAGE RIGHTS

Use original generated images under the provider's commercial terms, or your own/licensed photographs with recorded rights. Do not publish Amazon-hosted photos as Pin assets or upload them as generator references.

PAGE NOTICES

Say Amazon shopping links are affiliate links. Internal navigation is not an affiliate link. Label AI inspiration where it applies; do not call an owned product photo AI-generated.

09 / PINTEREST

Choose the public board.

VERIFY THE BOARD

Use the official account surface to confirm public status. Resolve the stable board identifier through the supported publisher route. If a connector cannot list boards, that does not prove the service cannot show them.

VERIFY THE PUBLISHING ARRANGEMENT

Customer scope and platform permission are separate. Pinterest's developer guidelines require end users to choose each scheduled Pin. Setup must establish compatible permission for the proposed unattended arrangement; blanket approval is not proof of an exception.

OPTIONAL NATIVE SCHEDULING

If you choose credit-saving, Pinterest's business scheduler supports standard Pins up to 30 days ahead and 10 scheduled at once. This kit uses a 14-day horizon and holds overflow as drafts.

The automatic production queue stays intact if permission or access is unverified. Review First is an optional mode, not a renamed version of unattended publishing.

10 / CONNECTIONS

Test actions, not logos.

SOURCE

Discover and qualify a product; obtain a link for your account; save and read back the record.

DESTINATION

Create/update the look's list or site page, then read back its contents and live address.

IMAGES

Preflight cost and rights, generate through the chosen model, retrieve the asset and add sharp typography.

PUBLISHER

Discover boards, schedule, read back scheduled and live posts, cancel a pending post and verify removal through permitted routes.

RECURRING RUNTIME

A separate scheduled test must reach the same accounts and records, then resume safely without duplicates.

An installed app or a successful foreground action does not prove every scheduled capability. Missing actions are recorded precisely.

11 / SPENDING

Pick a comfortable ceiling.

START WITH THE PACE

Two original images per look. Four looks a week is about 34 Pins a month, before Outfit of the Day. Count other channels against the publisher's plan too.

PREFLIGHT EACH GENERATION

Record provider, model, resolution, current quoted cost, commercial rights, attempt limit and monthly budget. Reserve expected cost before submitting; account for retries and uncertain outcomes.

STOP WHEN THE BUDGET IS USED

Retain completed assets and queued work. No quiet model changes, subscription purchases or upgrades. Adding typography should not cost another generated image.

WHAT THE CEILING MEANS

The workflow ledger controls this workflow's planned spending. It is not a provider account spending cap and does not cover unrelated use. Configure a provider-side cap separately if the provider offers one.

Manual generation remains an optional way to conserve connected-tool credits.

12 / YOUR VISUAL WORLD

Make it feel like your Pinterest.

Choose a recognizable setting, a few signature details and a restrained palette. Luxury comes from photography, clear type, generous spacing and believable texture.

WITH A PERSONA

Supply an authorized reference image. Identity comes from that reference, never a list of face, hair, skin or body traits. Name everyday places and changeable styling. Record signature props separately from linked products.

WITHOUT A PERSONA

Use a full product edit and a distinct person-free scene. Preserve the same underlying look and product packet. Change the photographic concept, not the product list.

THE TWO PINS

Pin 1 shows the complete edit. Pin 2 gives it a real-life moment. Both use one look record and destination; headlines remain readable at phone size.

Your kit's visual standard covers 2:3 composition, complete pieces, text safe zones, contrast, product accuracy and rights.

13 / OPTIONAL EXTRAS

Add only what you want.

OUTFIT OF THE DAY

An optional Brand Closet member route. The operator checks authorized lesson access and independently sources your own products and links. Paid lesson images, prompts and text are never republished or uploaded to generators.

THE BLOG HALF

A tested website write and live deployment add designed shop-the-look pages. A commit alone is not a live page. The website route is separately authorized in your scope.

INSTAGRAM

Optional feed carousels through a tested publisher. Keep correct captions, account, image order and applicable AI labels. A scheduler does not establish Story support.

REFERRALS AND DFY

Optional offers. Confirm current availability, enrollment and live terms in the classroom/shop. The kit does not require a referral enrollment or DFY purchase.

14 / HANDOFF

Leave the tasks paused first.

1 / SAVE AND READ BACK

Recipe, scope, capabilities, state, references and actual task IDs. Cloud tabs include blog and Instagram records when those channels are on.

2 / BUILD THE FIRST LOOK

Let the automatic operator source, create the destination and build both Pins. Show the exact first test Pin and schedule it only with the buyer's test authorization.

3 / CHECK THE REAL RESULT

Compare publisher readback against the final image, copy, link, board and time. Run the same look again; it must reconcile existing IDs without duplicate images, lists or Pins.

4 / RUN A CONTROLLED SCHEDULED TEST

Enable ongoing production only after the required capability and permission gates pass. Verify actual publication when it happens. Scheduled, published and verified remain separate states.

Next: open the System Guide. It contains the complete setup prompt and every supporting file, with an explanation and optional manual equivalent.

15 / SOURCES

Keep the account checks current.
