FREE KIT

Blogging isn't dead. It changed jobs.

How to write the article that keeps getting found for years, and the one-article-many-assets loop that makes a single post work all year.

01 The evergreen test

02 The two-reader rule

03 One article, many assets

01

The evergreen test

You don't have a "blogging is dead" problem. You have a "what to write" problem. Write for a question people will still search years from now.

Expires

EXAMPLE

"My 2026 goals"

LIFESPAN

Dead by January

Lasts

EXAMPLE

"How to choose a niche"

LIFESPAN

Searched every day, forever

Expires

EXAMPLE

News, trends, "this month" posts

LIFESPAN

Gone when the moment passes

Lasts

EXAMPLE

The question still asked in three years

WORTH

Ten trending ones

The test: before you write, ask "will someone search this exact question a year from now?" If yes, it's an asset worth building. If it expires with a trend or a date, it's a post.

02

The two-reader rule

Every article serves two readers at once: the person who needs the answer, and the search engine deciding whether to show it. They want the same thing. Search is trying to reward the article that best answers the question, which is exactly what the person wants.

The person

Answer her real question, completely and clearly.

The search

Structure it with headings and clear sections, so it's understood.

Both win: the most useful article is the one that ranks. The old trick of writing for robots is dead. Writing clearly for people is what ranks now.

Your article is ready when:

- [ ] It answers one question someone is already searching
- [ ] That question will still be asked a year from now
- [ ] It answers it completely, not halfway
- [ ] Clear headings make it easy to follow and easy to understand

Where the readers come from: search engines rank your article over time, and Pinterest surfaces your pins for months. Both keep sending readers long after you hit publish, with no daily posting required.

Social is renting attention by the day. A blog is an asset that pays rent forever.

03

The one-article-many-assets loop

One article compounds when you turn it into many things and link it to your other articles. You wrote it once. Make it work everywhere. Run this loop on every evergreen post.

1. **Write one evergreen article** that answers a real question.
2. **Make five pins that point to it.** Pinterest is a search engine, and a pin can surface for months.
3. **Repurpose it** into an email and a few social posts. This is where AI earns its place.
4. **Link it to your related articles,** so separate posts become a library that lifts each other in search.
5. **Place one honest recommendation inside it:** your own product, or a tool you'd recommend without a commission.

THE EVERGREEN ENGINE

Write one article → pin it five times → turn it into an email and posts → link it to the rest → and one piece of writing works all year, pinned and ranked, found for months.

Ranking is only half: an article that ranks and recommends nothing is a favour you did for free. Send every click to a page you own, then let the honest link inside it do the other half.
