

USE THIS WORKBOOK

Storefront prompts and workbook

Save your own copy

Open this PDF in a reader that supports forms. Save a private copy with your name or project theme. Fill the response boxes and save again. If your browser does not keep typed answers, use a PDF reader or print it. Keep passwords, tokens and private credentials out of every field.

Copy prompts when useful

Select the text under each prompt and paste it into your existing Claude or ChatGPT chat. Prompt text runs across clearly numbered pages. Copy all setup prompt parts together for the complete interview. If you prefer fully manual work, skip the prompts and complete the worksheets.

What is editable

The settings, product, image/budget, Pin review and test log pages have response fields. Duplicate the blank worksheets in your PDF reader for additional products and Pins, or print extra copies.

Working files are optional

Manual mode can use this workbook alone. Connected automation may require a private settings file, product intake, queue and log. The setup prompt creates those from your answers, then reads them back; those working files do not replace this guide.

Prompt order

1. Setup interview. 2. One themed look. 3. Optional task prompts after testing. Then use the worksheets for the actual records. Every finished Pin needs its own approval.

COPY TOGETHER

Setup prompt 1 of 3

Copy this prompt text

You are helping me set up While-You-Sleep Storefront. Use plain words. Ask one question at a time with a short example. Never ask for passwords, invent products or links, spend money, install recurring tasks or publish without the required specific authorization.

First ask whether I want manual, mixed or time-saving mode. Manual uses this workbook and native Pinterest. Mixed uses chat or supported tools for preparation with manual publication. Time-saving uses a supported tested runtime and accessible private state.

Ask my theme, clothing/home mix, voice, timezone and desired posting windows. Ask my Associates and Influencer status separately. Record actual Storefront, Idea List and onsite capabilities as separate verified or UNKNOWN fields. Use my eligible existing public Idea List, or require my compliant published website destination. Never promise application approval.

Ask my exact public Pinterest board and section and verify the selected destination. Record my publishing method: native manual, supported connected publisher, or independently eligible developer API. Missing verified access means build/queue only. Each finished Pin requires my approval of its exact image, copy, link, board and date/time.

COPY TOGETHER

Setup prompt 2 of 3

Copy this prompt text

Ask my image route: own/licensed asset or original layout, optional image generation, and optional rights-cleared persona reference. Record provider, model, plan, website/connector/API interface, current allowance, commercial-use evidence and maximum spend. Never assume website Unlimited applies to a connector or someone else's subscription transfers to me.

Ask where my private working records will live. For a scheduled runtime, record local/cloud environment and prove the actual runtime can read and write that state. A local folder is not automatically available in the cloud. Keep this Storefront project separate from other business automation.

If I already have state, ask whether to update an answer, renew planning, switch modes or start a new project. Preserve history. Record UNKNOWN where evidence is missing.

Manual mode: help me complete the workbook. No tasks or code files are required. Optional automation: prepare MY_RECIPE.txt settings, PRODUCT_SOURCES.md intake, pin-tab.md queue, pin-drafts.md draft details and storefront-log.md evidence. Use browser-lock.txt only for a workflow sharing a browser. Never store credentials in these records.

COPY TOGETHER

Setup prompt 3 of 3

Copy this prompt text

Settings must include mode, theme, mix, voice, timezone, boards/sections, Associates status, Influencer status, actual Storefront/Idea List capabilities, destination/site and publishing access, persona/rights, image provider/model/interface/plan/budget, runtime/state location, Pinterest method/access/approval, shutdown/HOLD, pace/look days, optional blog, Brand Closet permission gate and optional Instagram.

Every product row needs look, ASIN, my written product attributes, my own Special Link, destination and any reference-image rights. Examples and missing fields stay not ready. Queue records need stable ID, owning service/external ID when present, image, title, caption, alt text, destination, board/section, chosen date/time/timezone, status, APPROVE and PULL.

Use the buyer guide's copy rules: title 60-100 characters; caption 450-500; no prices or product-brand/film/character names. Begin caption #ad and end As an Amazon Associate I earn from qualifying purchases. Describe AI styling and similar-product destinations accurately.

Read back the saved settings and intake. Verify exact fields, public board, destination, rights, budget and current approval status. Stop missing items as HOLD with the next action. Keep Brand Closet disabled until written permission passes. Draft task prompts only after I choose real schedules. A template or old test is not proof of a run. Do not create new dates for withdrawn Pins or publish unapproved work.

COPY AND PASTE

One themed look prompt

Before you paste

Complete one product worksheet for every item. Attach only rights-cleared references. Supply the exact public destination and public board. This request prepares a draft; it does not authorize publication.

Copy this prompt text

Prepare one themed-look Pin from the verified product facts I supply below. Do not research Amazon autonomously, invent an ASIN, create affiliate links or change a destination. Mark missing facts HOLD.

Use my selected image route, rights and budget. Offer both a short low-cost Claude/ChatGPT route and a fully manual own-photo/licensed-asset/original-layout route. Do not generate or spend until the exact image operation is authorized. Inspect the actual image before claiming it passed.

Give me a 60-100 character accurate generic title, a 450-500 character caption and truthful alt text. Caption begins #ad and ends As an Amazon Associate I earn from qualifying purchases. No prices or product-brand/film/character names. If AI styling, call it inspiration; if the destination has similar items, do not call them the exact products photographed.

Return image reference, title, caption, alt text, exact destination, board/section and my chosen date/time with timezone as one draft record. Count characters. Check for existing records before making another. Save HOLD until I approve this individual finished Pin. Do not publish, choose a substitute date or install tasks.

My settings and product facts follow:

Manual alternative

Follow the same field checklist yourself. An AI prompt is optional; your workbook record and native Pinterest composer are enough.

OPTIONAL TASKS

Before you schedule any work

Confirm the actual schedule

These are templates, not installed tasks. Record timezone, schedule, local/cloud runtime, accessible private state, tool capabilities and budget. Test a draft-only run and read it back before recurring production.

Add this to each task

Use only the verified runtime and state location I supply. Read my current settings, product intake, queue and log first. Do not invent unknowns. Stop publication without approval of the exact finished Pin. Report the observed result and next action. No catch-up, spend increase or automatic replacement date is authorized.

Low-cost route

Run one short request yourself when you need it. No recurring task or paid scheduler is required.

Manual route

Choose the look, make the asset, write fields, schedule yourself and log the observed result. Skip the task templates entirely if this is your selected mode.

OPTIONAL TASK PROMPT

Weekly planning / build

Copy this prompt text

Schedule: the user's confirmed day/time only.

Read sources and reconcile existing records before generating. Resume by stable ID.

Use only ready customer-supplied product rows and rights-confirmed references.

Produce a finished image, title, caption, alt text, destination, exact public board and proposed date/time.

Follow the themed-look section of the buyer guide. Save as draft/HOLD. Stop before publication unless the user has explicitly approved this exact finished Pin and its date/time.

No automatic Amazon product/list creation. No new dates for withdrawn Pins.

Read back any created draft and log whether every field matched.

Low-cost Claude/ChatGPT: run one short batch request manually with verified intake.

Manual alternative: select the look, make the asset and complete its queue record yourself.

OPTIONAL TASK PROMPT

Optional outfit of the day

Copy this prompt text

Default: disabled.

Enable only after rights, access and the separate recipe permission gate pass.

Use original customer-owned styling notes or permitted materials. Never infer commercial reuse rights from paid membership.

Apply the same draft/approval/state rules as Task 1.

Low-cost Claude/ChatGPT: supply your own brief in a short chat.

Manual alternative: create an original look from your own notes; skip paid content entirely.

OPTIONAL TASK PROMPT

Reconciliation / pull

Copy this prompt text

Schedule: user's confirmed time only.

Read existing native Pinterest and Metricool records separately. Match by exact external ID, then destination/look. A missing result from one service is not absence from the other.

Update state from observed results. HOLD withdrawn records. Process a requested change only on the identified record in the service that owns it.

Do not regenerate or create a duplicate after a timeout. Read back first.

Never treat PULL as automatic publication approval. Never choose a substitute date.

Report actionable changes, failure or user action; otherwise keep routine results in the log.

Low-cost Claude/ChatGPT: give chat the latest statuses for a short comparison.

Manual alternative: inspect scheduler records and update pin-tab.md yourself.

All publication needs explicit approval of the individual finished Pin. Do not install these templates as recurring tasks without the user's actual schedule.

EDITABLE WORKSHEET

Your account and settings

Record what you have actually verified. Use UNKNOWN for anything not checked.

Operating mode, theme and voice

Associates status, Influencer status and actual Storefront / Idea List capabilities

Exact public destination URL and public visibility evidence

Pinterest account, exact public board / section and IDs if known

Timezone and your chosen posting windows

Publishing method, access status and individual approval process

EDITABLE WORKSHEET

Your runtime and budget

Manual mode may use this workbook alone. Fill the runtime fields only if you use connected or scheduled work.

Image route, provider / model / interface and current allowance

Commercial rights evidence and maximum spend before generation

Persona reference and consent / rights, or person-free route

Private state location, backup and local / cloud runtime

Actual state read / write test, date and evidence

Optional blog / Instagram; Brand Closet permission or disabled

EDITABLE WORKSHEET

One product intake

Use one page per product. Complete every item in a look before marking the look ready. No sample ASIN or guessed link is ready.

Look name, product number and customer-selected ASIN

Your written description, color, material, shape and visual details

Your own verified Amazon Special Link

Published Idea List or look-page URL for this look

Reference image and commercial / transformation rights, or none

Ready / HOLD and any missing information or next action

EDITABLE WORKSHEET

Review one finished Pin

Fill the full record before approval. Count title and caption characters using your editor or a short chat request.

Stable ID, look and image file reference

Title and character count

Caption and character count

Alt text describing the actual image

Exact destination URL, public board and section

Your chosen date, time and timezone; AI-content / AI-person labels

EDITABLE WORKSHEET

Approval and external record

Approval applies to this exact finished Pin. A withdrawn date stays HOLD; it is not replaced automatically.

Stable ID and final image / copy version reviewed

Rights, image, disclosures, link and board checks; evidence

APPROVE or HOLD, your name and approval date / time

Owning service and exact external record ID / URL

Observed draft / scheduled / published status and exact date / time

PULL / withdrawal request and observed external change, or none

EDITABLE WORKSHEET

Test and recovery log

Pass only the behavior you observed. Native Pinterest and Metricool have separate records.

Test date, stable ID and owning service

Expected behavior and fields

Observed result and evidence / screenshot reference

PASS / UNVERIFIED / FAILED and the exact reason

Next action, owner and required approval if any

Work preserved, duplicate check and resume condition
