

SETUP GUIDE

The While-You-Sleep Storefront™

Your Amazon links, turned into Pinterest pins that get built and scheduled on their own.

PHOTO PLACEHOLDER

cover-sofa-dusk.jpg
(Tommy Kate asleep on the sofa at dusk)
Prompt: IMAGE_PROMPTS.md

- ✓ About 5 minutes to start
once your accounts are ready
- ✓ Then no building, no selling, no posting
on the Influencer path: the scheduled tasks do it
- ✓ Found through search
not the feed

xoxo, Jodie

WHAT YOU'RE HOLDING

A machine that makes pins **while you sleep.**

You set it up once. After that, scheduled tasks in the Claude desktop app do the work, on a timetable you pick.

Amazon

5 to 8 pieces per look, each with your own affiliate link

**Pinterest**

two pins per look, 3 days apart, with your #ad line

**Your list**

an Idea List, or a shop-the-look page on your own site

AUTOMATION 1 · THEMED LOOKS

Once a week it picks looks for your theme from a seasonal calendar and an evergreen bank, sources the pieces, builds the list, makes a styled flat lay and a second image, writes the pin copy, schedules both pins and logs everything.

AUTOMATION 2 · OUTFIT OF THE DAY

For The Brand Closet™ members on Rose's \$9/month tier or above: Sunday to Friday nights it turns the new Outfit of the Day into **your own** pins, with your own Amazon links and your own images. Nothing of Rose's is ever posted.

The honest part. The tasks run from your own computer, so it stays on with Chrome open and signed in when they run. And an optional glance at your pin tab and log is how you pull anything you don't like before it posts.

What it doesn't promise: sales. Pinterest is search, and pins get found over weeks and months. This builds and runs the machine. What people buy is up to them and Amazon.

STEP 0 · BEFORE ANYTHING

What you need, **up front.**

If one of these is missing, the machine doesn't run. Get it first. Full detail is in 01_REQUIREMENTS.txt.

- ✓ A Claude plan with scheduled tasks and Claude in Chrome
Both have to be on your plan. Check claude.ai for which plans include them today.
- ✓ The Claude desktop app, with your computer on during runs
Chrome open, signed in, the Claude in Chrome extension installed.
- ✓ Amazon Associates, plus Influencer approval for Idea Lists
No Influencer approval? The Associates-only path uses a page on your own site, and on most site builders you paste it in yourself.
- ✓ A Pinterest business account with public boards
Secret boards reach nobody. The setup checks every one.
- ✓ Only for the blog half: Chrome signed in to GitHub
With write access to your site's repository.
- ✓ Gemini and Higgsfield accounts
Higgsfield (Seedream 4.5) makes every flat lay. Gemini makes persona photos, so no persona means no Gemini.
- ✓ The Brand Closet™ at Rose's \$9/month tier or above
For automation 2 only. It carries the Outfit of the Day.

You don't need a website (unless you choose the Associates-only path or the blog half), Instagram, design skills, code, or your face on camera.

STEPS 1 TO 3

Get your computer **ready.**

1

MAKE YOUR FOLDER

On your computer, make a new folder called **While-You-Sleep Storefront**. Unzip this kit into it, so the folder holds all twelve .txt files and this PDF. Keep it somewhere you'll find it again, like Documents.

2

SIGN IN, IN CHROME

Open Chrome and sign in to: **Amazon** (you'll see the SiteStripe bar across the top of any product page), **Pinterest**, **Higgsfield**, and **Gemini** if you have a persona. Install the **Claude in Chrome** extension and connect it to your Claude account. The tasks never type a password, so everything has to be signed in already.

3

OPTIONAL: JOIN THE BRAND CLOSET™

Only if you want automation 2. It's Rose's community: free to join, and her paid tiers are \$9/month and \$19/month (her prices). The Outfit of the Day is on her \$9/month tier.

[Join The Brand Closet™](#) and stay signed in to Skool in Chrome.

Affiliate link: I earn a commission if you join, at no extra cost to you.

MADE BY
THE
TASKS,
NOT ME

STEPS 4 AND 5 • THE 5 MINUTES

Paste one prompt. Answer six questions.

4

OPEN A CHAT WITH YOUR FOLDER ATTACHED

Open the **Claude desktop app** and start a new chat. Attach your While-You-Sleep Storefront folder to it, so Claude can read the kit and write your files there. (Look for the paperclip or the option to add a folder. The button names can shift as the app updates; if yours look different, ask Claude in that chat how to attach a folder.)

5

PASTE THE SETUP PROMPT

Open **02_SETUP_PROMPT.txt**. Copy everything between the two long lines. Paste it into the chat and press Enter. Claude asks you six things, one at a time, with an example each time:

1. your theme
2. your boards (and it makes you check each one is public)
3. your storefront and your website, if you have one
4. whether you have an AI persona
5. whether you're in The Brand Closet™
6. your time zone and when your computer is on

Then it writes your files into the folder: **MY_RECIPE.txt**, **storefront-log.md**, **pin-tab.md**, **pin-drafts.md**, **browser-lock.txt** and **MY_SCHEDULED_TASKS.txt** (plus a pages folder if you paste pages into your site yourself).

My own words, because people ask: it took me 5 minutes to set up. That's with Amazon, Pinterest and my image tools already signed in.

STEPS 6 AND 7 • NEVER SCHEDULED A TASK? START HERE

Hand it **the timetable.**

6

CREATE YOUR SCHEDULED TASKS

Open **MY_SCHEDULED_TASKS.txt**. It holds two tasks (three if you're in The Brand Closet™), each with one line telling you exactly what to type. For each one:

1. In the Claude desktop app, open **Scheduled** tasks (in the sidebar) and choose to create a **new task**.
2. Type the **name** from the file.
3. Set the **schedule** from the file (for example: weekly, Saturday, 1:05 pm).
4. Give it your **While-You-Sleep Storefront folder**.
5. Paste the **prompt**: everything between that task's two long lines.
6. **Save**.

App menus move as Claude updates. If you can't find Scheduled, ask Claude in any chat: "How do I create a scheduled task in this app?"

7

WATCH THE FIRST RUN

Run the weekly task once by hand (use the task's run-now option) and stay nearby. The first time, Chrome and Claude may ask you to allow each site (Amazon, Pinterest, Higgsfield, Gemini, and Skool or GitHub if you use them). Allow them. After that, it runs on its own.

3 DAYS
BETWEEN
PINS

STEPS 8 TO 10 • LIVING WITH IT

Then you leave it alone.

8

KEEP THE COMPUTER ON AT RUN TIMES

Set your computer not to sleep during the run times in MY_RECIPES.txt, leave Chrome open, and leave the window the task is using alone while it works. If it's off at run time, that run waits until it's back on. The pins themselves post from Pinterest, so the computer can be off when they go live.

9

OPTIONAL: GLANCE AT YOUR PIN TAB

Open **pin-tab.md**. Every scheduled pin is there by date. Don't like one? Type **PULL** in its last column and save, by 11:30 am on its posting day (the evening before, for a pin that posts before noon): the pull sweep (noon and 6 pm) removes it from Pinterest and marks it pulled. Or delete it yourself in the Pinterest app, any time, and type PULLED in its row. **storefront-log.md** has every look and every link.

10

OPTIONAL EXTRAS

09_THE_BLOG_HALF.txt: a shop-the-look section on your own site, written for Google. **05_RECOMMEND_IT_TOO.txt**: a Brand Closet™ card for your pages. **10_INSTAGRAM_ADD_ON.txt**: feed posts (stories are by hand).

WHAT A NORMAL WEEK LOOKS LIKE

Saturday (and Wednesday, at 5 or more looks a week), the weekly task builds the coming looks and schedules them. Sunday to Friday nights (if you're on Rose's \$9/month tier or above), the Outfit of the Day run turns in new outfits. Twice a day, the sweep checks for pulls and leftovers, and opens nothing if there aren't any. You get a one-line report when a run finishes.

WORKED EXAMPLE 1 • AUTOMATION 1

My Pink Witch Halloween Costume.

WHAT THE WEEKLY TASK DID

Picked the look	From the Halloween window of my calendar.
Sourced 6 pieces	Soft pink velvet witch hat, black velvet square neck mini dress, black platform Mary Jane pumps, pale pink lace gloves, black crescent shoulder bag, gold moon and star drop earrings. Every one with my own SiteStripe link.
Built the Idea List	One list in my storefront, every piece on it. Both pins link there.
Pin 1	A styled flat lay on pink satin (Seedream 4.5), title set on the image: "PINK WITCH costume". Checked letter by letter.
Pin 2	A mirror selfie of my AI persona wearing every piece (Gemini, reference image attached), face hidden by the phone.
Copy and schedule	Title, 450 to 500 character description with the #ad line, alt text, AI label on. Pin 1 on the look's date, pin 2 three days later.
Logged and published	Written to the log and the pin tab, and a shop-the-look page added to my site and checked live.

No prices anywhere, no brand names in the list or the pins, and nothing from Amazon's own photos posted: they were only the reference for new images.

WORKED EXAMPLE 2 · AUTOMATION 2

My pink color-block hoodie **Outfit of the Day.**

PHOTO PLACEHOLDER

hoodie-flatlay.jpg (my own generated flat lay, never Rose's image)
Prompt: IMAGE_PROMPTS.md

WHAT THE NIGHTLY TASK DID

Found the lesson	A new outfit in The Brand Closet™ Outfit of the Day Closet course, not yet in my log.
Looked, didn't take	One screenshot of Rose's flat lay, for reference only. Her images and prompts are paid member content: never posted, uploaded or attached anywhere.
Skipped the Benable links	They pay their owner. Every piece was re-found on Amazon with my own SiteStripe link.
Built my own Idea List	My list is the pin link.
Made new images	A new flat lay (Seedream 4.5) and a lifestyle photo of my persona (Gemini). Rose's lifestyle prompt gave the scene idea only, with every brand and store cue stripped.
Scheduled	Flat lay at 4:30 pm the day after the outfit, lifestyle at 9:30 am three days later, on its own slots.

Where it really stands, 27 Sep 2026: the flat lay is scheduled and verified. The lifestyle pin is finished and waiting for a slot. And the board it went to was set to secret, so it reached nobody. That's why the recipe you're holding checks every board is public before the first pin. Learn from my mistake, not yours.

WHEN SOMETHING'S OFF

What the tasks do when things go wrong.

PINTEREST LOADS BLANK

The task closes the tab, waits, and tries once more. Two blanks in a row and it stops for that run. Every finished pin is already saved in pin-drafts.md, and the next sweep picks the leftovers up. You do nothing.

YOU'RE SIGNED OUT

If Amazon's SiteStripe bar is missing, the task stops and tells you in one line. It never ships a link without your tag, and never types a password. Sign back in; the next run carries on.

A BOARD WENT SECRET

The task checks every board before the first pin. If one is secret, it schedules nothing and tells you which board.

THE COMPUTER WAS OFF

That run waits until the computer is back on. Nothing is lost: leftovers are logged and scheduled first next time.

YOU HATE A PIN

Type PULL next to it in pin-tab.md. The sweep removes it from Pinterest at noon or 6 pm.

AN IMAGE COMES OUT WRONG

The task gets two correction rounds, then regenerates once or drops the look and logs why. It never ships a misspelled title.

The one-line report after each run tells you if anything needs you, and exactly what to do.

WHAT'S NEXT

Add the blog half, or hand it to me.

HAVE THE WEEKEND ECOSYSTEM™?

09_THE_BLOG_HALF.txt adds a shop-the-look section to your site in one paste, with every look page written for Google. My Pinterest block is on my domain only, so your pins can link to your own pages.

Don't have it? The machine runs without a site, straight to your Idea Lists. If you ever want the blog half too, [The Weekend Ecosystem™](#) is \$97 one-time, or 3 × \$33.33.

RECOMMEND THIS KIT

Members of The Digital Income Edit™ earn 40% on every sale they refer, through Beacons' own affiliate feature. The four steps are in 11_WHATS_NEXT.txt.

WANT IT DONE FOR YOU?

The DFY Amazon Storefront Launch is \$297 for 10 themed looks: each an Idea List in your storefront plus 2 pins with your #ad disclosure, built on the same method you're holding.
